

total management of organisational learning

For organisations, the pressure is on. Employees require on-demand information specific to their needs and task in hand. Training courses need to be available in multiple formats both online and offline. Authors need to increase efficiency by leveraging existing content in new courseware. Learning Content Management Systems (LCMS) can meet these needs by providing a central site to create, reuse and deliver learning content. To be effective, an LCMS must be able to...

- Offer native authoring capabilities
- Acquire or import content from any source
- Assemble new content from acquired or existing content
- Provide robust content management
- Publish, deliver and distribute content in multiple formats and over multiple channels

If any of these functions are missing, your organisations strategic systems ROI rapidly evaporates.

Through **Outstart Evolution LCMS®**, New Wave is able to deliver the most flexible, adaptive and comprehensive environment for creating, managing, assembling and delivering content within your organisation. It is the only system that provides content reusability at the smallest granular level in order to protect your investment down to each nugget of information. **Evolution LCMS** maintains the value of existing knowledge with a central repository that manages content from any source. The key benefits of **Evolution LCMS** are:

- Reduce total cost of ownership with support for learning and platform standards
- Optimise author productivity with multiple content creation options
- Reduce development time and costs with reusable content
- Increase user adoption of organisational systems
- Understand the effectiveness of your people with robust assessments

The development and management of content may only be part of the overall picture, as once created learning content needs to be delivered to the relevant audiences. Learning Management Systems (LMS) offer a strategic solution for training administration. However, they typically take months to install and customise, resulting in high deployment costs, labour intensive maintenance and low acceptance by users. New Wave offer cost-effective training administration through **Outstart Evolution LMS®**, with which you can manage all of the administration that surrounds learning at a fraction of the cost of traditional systems.

Offering a choice of hosted or in-house deployment, **Evolution LMS** is built for fast time-to-value. An extensive set of templates and automation to import existing user and course data, quickly establishes a functional LMS. Even better, **Evolution LMS** offers a rich set of GUI-based configuration capabilities. You can configure the system to your exact needs without programming or long-term professional service contracts for significantly lower total cost of ownership. In fact, the average 3 year cost for **Evolution LMS** is less than 50% of a standard LMS, and also provides the following benefits:

- Manage the complete learning process
- Increase effectiveness of training – intuitive, personalised administrator and learner portals
- Improve administrator productivity – gain complete control
- Increase user acceptance by optimising the learning experience
- Rapid development and deployment of training and learning content at a much reduced cost
- SCORM 1.2 and 2004, ADA Section 508 and FDA CFR Part 21 Compliant
